

# caluma

*A collaborative form editing service*

Caluma moves your processes into the digital world.

*[projectcaluma.github.io/](https://projectcaluma.github.io/)*

*[@projectcaluma](https://twitter.com/projectcaluma)*

## Open source at its core

*Caluma is 100% open source so it is not tied to a single vendor and you are free to use and modify it as you like.*

## Open standards and the web

*Caluma is made for modern web applications. Building upon web standards such as GraphQL.*

## Developer experience

*Caluma aims for first class developer experience. Developers can use the tools they love.*

## Empowering business users

*Caluma provides powerful administration tools. Allowing easy configuring without technical knowledge.*

## Flexible architecture

*Caluma consists of two main parts: the Caluma Service and the Caluma Client.*
